OVERNIGHT

Every car owner needs the protection of Sonaguard. Reports of car theft and vandalism continue to increase, and even your insurance cannot repay you for your anxiety and inconvenience when you are the victim. The contents of your car — luggage, cameras or furs, for example — are difficult to recover and replace. But the noise and attention created by Sonaguard repels intruders and thieves — frightens them away before they can move your car or remove its contents.

Sonaguard is tamperproof — any attempt to cross or jump wires will set off the alarm. An accidental short circuit is also detected — additional protection against fire which might be caused by such an occurrence. Parking lights or accessories turned on before you lock the control switch will not disturb the system — only additional battery drain, detected after you leave the car, will sound the alarm.

EASY TO INSTALL

Simplified design of Sonaguard requires only the installation of the switched hood lamp and the connection of negative and positive battery leads for the detection phase. Connection of the security lock switch and leads from horn and headlights completes the warning phase installation.

DEPENDABLE LOW-COST OPERATION

The all-transistor design of the Sonaguard unit requires extremely low battery discharge in operation. Transistor circuit is dependable, too — lasts longer and resists road shocks to be ready when needed.

TESTED AND PROVED

An independent testing laboratory subjected Sonaguard to extreme conditions of heat, humidity and vibration. After rigidly controlled tests, more severe than anything encountered in normal driving, every Sonaguard unit came through with all components undamaged and ready for action!

American	Marlin
CHRYSLER	Oldsmobile
LINCOLN	Valiant

AND ALL OTHER MAKES

SONAGUARD'S 4-WAY DETECTION SYSTEM

NEW ALL-TRANSISTOR AUTO ALARM SYSTEM

Only SONAGUARD offers all these!

1 **THIEVES CANNOT BREAK IN THRU THE HOOD . . .**
Sonaguard's ingenious and effective protection guards your car in this critical area. Any attempt to lift the hood by a would-be thief and disconnect Sonaguard is detected by the hood light which activates the alarm.

2 **THIEVES CANNOT FORCE THE DOORS OPEN . . .**
Whether you have a 2-door or 4-door model Sonaguard's complete protection guards your car from forced entry. Even a professional thief who is adept at gaining entry to a locked car cannot pass Sonaguard undetected.

3 **THIEVES CANNOT STEAL PACKAGES IN THE TRUNK**
Sonaguard's extra, thief-proof detection system protects your packages and clothing stored in your trunk. Often thieves will pilfer your car while you are shopping, dining, or parking for an extended period.

4 **THIEVES CANNOT "JUMP" THE IGNITION . . .**
Car thieves who are skilled at "jumping" a locked ignition are unable to start the car and make a fast getaway. The Sonaguard protected ignition can only be started by you and no one else.
